

OPTIPRO PLUS - EXCEPTIONAL DURABILITY IN VARIOUS APPLICATIONS

MDC® Doctor Blades

The OptiPro Plus is a wiping blade for medium to high line screen process or line work. With medium flex strength and a thinner tip, this blade provides a clean wipe for printing process colors on higher line screen anilox rollers. The OptiPro Plus contains a special polymer to lower friction reducing both blade and anilox wear. This special polymer, coupled with our proprietary tip machining process, provides a sharp, consistent tip. This blade has good abrasion resistance, which makes it also ideal for use as a containment blade in chambered systems. The markets using this OptiPro Plus include flexible packaging, labels, folding carton, envelope and some coating applications.

OPTIPRO PLUS

| Blade Thickness | Blade Width |
|--------------------------------------|----------------------------------|
| 0.635 - 0.890mm (0.025" - 0.035") | 12.7 - 50.8mm (0.50" - 2.00") |

The OptiPro Plus is an acetal-based blade with a built in lubricant. This doctor blade will work for all inks. The most common thickness used is 0.75 mm (.025"), in a 15 degree bevel, thin lamella or straight tip configurations.
